Instructions for Catalog # 517QR
WatR™Pollution Tin and Titanium
Revision 030512

Description:
- This standard is packaged in a 15 mL screw-top vial containing approximately 14 mL of standard concentrate.
- This concentrate is preserved with approximately 10% (v/v) hydrochloric acid.
- The concentrate can be stored at room temperature.
- The diluted standard will contain Tin and Titanium in the ranges specified on the data reporting form.

Before you begin:
- This standard has been prepared as a concentrate and must be diluted prior to analysis.
- It is imperative that at least 5 mL of hydrochloric acid be added to the dilution water prior to adding the Tin and Titanium concentrate.
- While it is technically not necessary to digest this standard prior to analysis, digestion should be performed if this is your normal procedure.
- This standard should be analyzed as soon as possible after the concentrate is diluted.

Instructions:
1. Add 100-200 mL of deionized water and 5 mL of hydrochloric acid to a clean 500 mL class A volumetric flask.
2. Shake the Tin and Titanium vial prior to opening.
3. Using a clean, dry, class A pipet, volumetrically pipet 5.0 mL of the concentrate into the 500 mL volumetric flask.
4. Dilute the flask to final volume with deionized water.
5. Cap the flask and mix well.
6. Immediately analyze the diluted sample by your normal procedures.
7. Report your results as µg/L for the diluted sample.

Safety:
ERA products may be hazardous and are intended for use by professional laboratory personnel trained in the competent handling of such materials. Responsibility for the safe use of these products rests entirely with the buyer and/or user. Material Safety Data Sheets (MSDS) for all ERA products are available by calling 1-800-372-0122.
